

Introducing RTRYVA Indoor, The Future of Indoor Cabling

RTRYVA Indoor, our new pre-fibred cable solution, is revolutionising how we think about indoor cabling. Only 6mm in diameter and able to support eight customer drops, RTRYVA Indoor is perfect for bringing Fibre into your customer's homes.

Its pull-back capability of up to 30m and B2Ca rating, suitable for ALL building regulations, make it the ideal choice for any business looking for a cost-effective and reliable indoor cabling solution.

What's more, RTRYVA Indoor minimises CAPEX spending with no additional splicing or blowing required at each customer break-out point, making it the perfect choice for FTTH rollouts and MDU installs.

Don't miss out. [Speak to your sales representative](#) or visit our [website](#) to learn more about our new RTRYVA Indoor solution today!

The Importance of future-proofing network infrastructure!

Exciting news! One of our Team, [Scot Bohaychuk](#), has published an article in [ISE Magazine](#) discussing the importance of future-proofing network infrastructure.

“If I was to build a house in the middle of a field, I would have the opportunity to lay the best fiber straight to that home. But I don’t just want to focus on my needs today. In 10 years, I may have set up a business and base my office at home with staff, and my broadband expectations may have gone from 1G to 100G.”

At Emtelle, we understand the importance of future-proofing and focus our solutions around our OneDig strategy to ensure that all network rollouts are prepared for the future. By focusing on the capital and maintenance aspects of network infrastructure, we can provide our customers with a long-term, sustainable solution that will meet their

needs today and in the future. To learn more about Emtelle and how they are answering the challenges facing Network Rollouts in the US and worldwide, click the link below

Adding value to FTTX networks around the world with technical knowledge to develop, perfect and sustain the optimum solutions

We recently had a technical session with Globe Telecom and its contractors!

Our team, including sales director [Anubhav Singh](#) and Lead Applications Engineer, [Dave Rames](#), along with Livan Trade, had the opportunity to share best practices and key considerations when installing blown fibre.

The session was highly interactive and well-received by the 70 attendees.

We are thrilled to have had the chance to educate and enhance the knowledge of those working within the industry. We look forward to continued success and growth in our partnerships.

Emtelle was on-site at [NTCA–The Rural Broadband Association](#) ! 🤝

NTCA saw over 2,000 attendees from the rural broadband industry come through the doors. It was a fantastic opportunity for our USA team, [Scott Modha](#), [Ryan McKnight](#), [Don Jacobs](#) and [Todd Dinneny](#), to connect, share their knowledge and expertise, and offer hands-on experience and advice on our most innovative end-to-end fibre and duct solutions.

We are delighted by the many visitors who approached our booth to discover our easy-to-deploy fibre and why we remain the global leader in blown fibre & ducted solutions. For those who could not make it, we will continue to exhibit at exhibitions across all our regions, and we look forward to meeting you.

You can find out about all our upcoming exhibitions on our website; <https://www.emtelle.com/events/>
