

Hello LWL-Portal,

In 2023, operators are beginning to turn their focus to building service capabilities that allow them to better [monetize RAN coverage and capacity](#). This includes an acceleration in the move to 5G standalone (SA) as operators look to leverage network slicing and other SA capabilities to enhance their service offerings.

Heavy Reading's [2023 5G Network Strategies Operator Survey](#) provides insights into how networks are evolving as operators and the wider mobile ecosystem continue to invest in 5G technology and services. This fifth annual version of the survey presents the results of 100 global service provider professionals conducted in January of this year. [Download the report](#) to analyze:

- The shift from 5G network deployment to 5G monetization
- 5G RAN evolution, 5G standalone core, and 5G edge computing
- 5G transport networks and 5G security
- Insights from industry organizations 5G Americas and ATIS
