

March 2021

Dear LWL-Portal,

At VIAVI Solutions we strive to innovate with new approaches to the challenges you face when certifying fiber deployments and to continually improve our products, both workflow and applications, making them easier for you to setup and simpler to use.

In this spirit we are pleased to share with you a comprehensive and complete update to the look, feel, operation and performance of our OTDR and related applications on the SmartOTDR, T-BERD®/MTS-2000 V2, -4000 V2, -5800, OneAdvisor and CellAdvisor 5G platforms. We call this “**OTDR 2.0**” and it is harmonized across the platforms to take the headache out of switching tools and minimizing familiarization time.

The user experience has been redesigned to deliver class-leading usability and performance, making life easier for fiber techs in the field. By reducing complexity and adopting modern smart device techniques we have simplified OTDR setup and operation to get techs of any skill level up-and-running in no time while reducing test and reporting times.

Specifically, the update is engineered to be optimised for an unsurpassed user experience and workflow that enables:

- direct access to key test setup menus, key features and results
- assisting techs through test, analysis, and reporting
- larger results display area, easier to read with SmartLink, Trace and Table views presenting all information in one place
- detailed fault diagnosis with guidance on root cause and course of action
- improved test/workflow for high fiber count cables

The updated user interface is fast and responsive, with multi-touch swipe, pinch zoom, scroll and long press gestures that put control at your fingertips allowing for:

- greater instrument control and results manipulation
- scaling/zooming for superior visual results detail
- precise customizable measurements
- instant switch between SmartLink, Trace and Table views without switching apps

We believe this sets a new benchmark for OTDR performance, usability and simplicity. We invite you to experience the updates by watching our [promotional video](#).

Beginning with firmware release V21.xx, coming in Spring 2021, the user experience of the VIAVI fiber test solutions will be changing... for the better.

[Register your interest here](#) to be the first to discover a new way in fiber testing from VIAVI Solutions.
