INNOVATIVE IDEAS FOR A CHANGING WORLD.

INFRA

The latest developments in fiber optics

Dear LWL-PORTAL,

Developments in the field of connectivity are taking place faster than ever. Both in the Netherlands, but internationally too. That is why we continue with our hard work, both nationally and internationally, to ensure that you are always a step ahead. To enable you to install fibre optic cables quicker, simpler and more cost-effectively.

That is infrastructure according to ATTEMA.

INFRASTRUCTURE BECOMES CONNECTIVITY

INFRA CONNECTIVITY

From now on, our product group 'Infrastructure' has a new name: 'Connectivity'. We have chosen a more international name, because our activities are becoming increasingly international. The German KAISER Group, of which ATTEMA is part, has even established its own business unit, mainly to intensify the activities in Germany. The activities in export countries, such as Belgium, France, Scandinavia, etc., will continue to be coordinated from the Netherlands.

online congress
08 - 10 JUNE 2021

**KAISER**
GROUP

The ANGA COM Trade Fair will take place from 8 - 10 June 2021. This edition is digital: an online conference about broadband and media. ATTEMA will participate in this conference, under the name of the KAISER Group. We would like to invite you to attend our contribution on Wednesday 9 June at 13:00 hours during the “FTTH – Connecting the Rural Area” section. This is certainly of interest for companies that operate in Germany. [Click here for the full programme.](#)

FTTX IN GERMANY

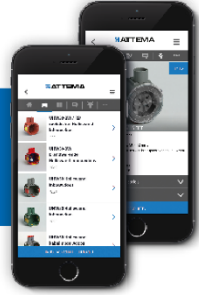

ATTEMA has expanded its range 'Hausübergabepunkt' (HÜP) for the German market. In addition to the existing models, the range now includes a solution for grant-funded projects, both standard and prefab. That makes fibre optic cable installation simpler and quicker. And therefore more profitable. Useful to know if you are active in the German market.
